

• insect resistant • water resistant • fire resistant

## INTRODUCES OUR UNIQUE AND TESTED VINEYARD POST

## FAQ'S

### **Why the EcoCrust Post?**

With fluctuating costs and the market demands of steel, we felt the time was right to introduce a steel and wood alternative for vineyard use at a stable price.

### **What is the EcoCrust Post made out of?**

The EcoCrust Post is made out of Magnesium Oxide. Magnesium Oxide (which we use) is a natural occurring mineral from the earth's surface.

### **Is the post strong enough to use in my vineyard?**

The post we tested at our plant, when suspended by the ends of the post, held a middle weight in excess of 1000 lbs. Please see vineyard tests on our website.

### **Is there any other reason I should buy this post?**

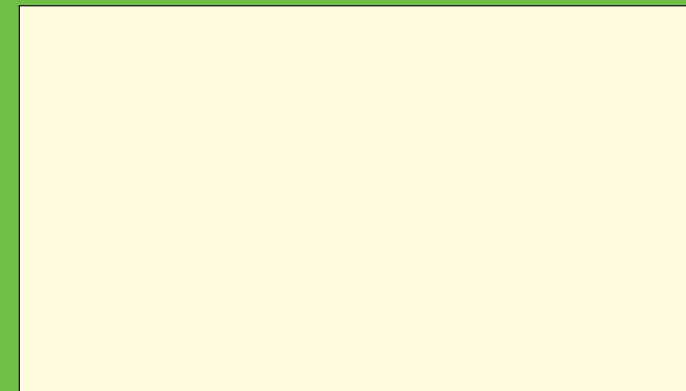

This post is also water resistant, fire resistant, insect resistant, and mold resistant, to name a few of its positive attributes.

### **Does it require special tools or equipment to put in my vineyard?**

No. You can pound the post into the ground with a post pounder, drill holes with a normal drill, and put normal screws into the holes. And, run a mechanical harvester over them when your crop is ready.

### **Where can I get one or see how they are used?**

Contact us for a distributor near you. You can also access our web page and see all of the positive attributes, in video and print.
